

Models 8320 & 8321 Programmable Attenuator Units Local, Ethernet, USB & RS-232 Control

up to 40 GHz

Control Software Included

Weinschel's Labview based Attenuator Control Center Software (ACCS) can be used in conjunction with the operation of the this series of programmable attenuator units and allows the user to setup, control and perform test and measurements over standard communication interfaces such as RS-232, USB, Ethernet or optional IEEE-488.

Description

Weinschel's Model 8320 and 8321 Series Programmable Attenuator Units represent a new streamlined approach in programmable attenuation for bench test and subsystem applications. Standard 8320 and 8321 Series designs house and control various Weinschel Programmable Attenuator Models (3200-XE, 3400, 150T, and 4200 Series) via front panel controls, ethernet, USB and Serial communications interfaces. A GPIB (IEEE-488) interface is also available as an option.

The 8320 series are single or dual channel configurations housed in half rack enclosures. The 8321 series are multi-channel configurations housed in 19 inch enclosures and can be configured for up to 12 attenuation channels. Both series can be configured for front or rear and through (front to rear) is only available for 8321 Series.

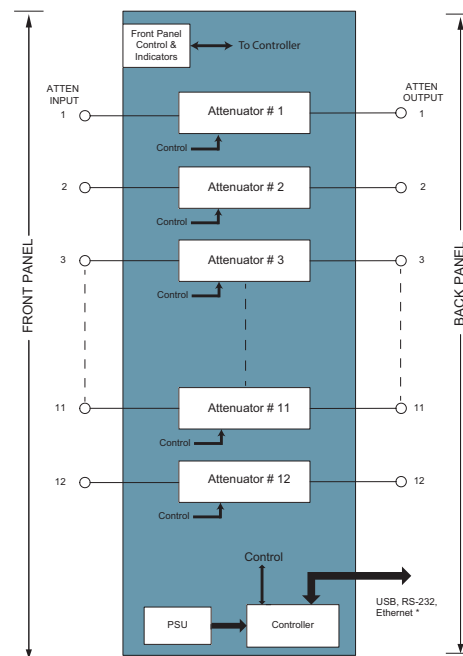

Weinschel also provides custom subsystems where a variety of test configurations can be incorporated within a single unit. Contact us with your specialized needs.

Applications

Applications for the 8320 and 8321 Series range from providing control of a single Programmable Attenuator in a bench test/lab environment, to complex system applications where the 8320/8321 Series are employed inconjunction with many devices to create custom subsystems to reduce overall design cost. Multiple programmable attenuators can be used in conjunction with other coaxial devices such as switches, power combiners, directional couplers, and filters to create various multi-channel test configurations.
