

OU-FLEX SHELF

OU-Flex transforms the traditional one-way feed for video broadcast into a two-way connection between the site and the studio, providing more flexibility to broadcasters and SNG (Satellite News Gathering) operators to facilitate remote production and distribute video content to online platforms.

Sematron is pleased to offer a fast, low cost and simple way for any DSNG operator to access the benefits of the OU-Flex platform.

Manage your entire video and data contributions with maximum flexibility, simply by equipping your SNG vehicle with our OU-Flex modem self and WiFi Router. Richer media content is ensured via bi-directional broadband links, with minimal infrastructure investment and low operating costs.

With tailored service packages for media communications, IP video streaming, social media and file transfer; the Sematron OU-Flex shelf enables you to stream live video from

- MDM3310 IP modem
- Single self-contained 1RU shelf
- WiFi Hotspot enabled
- Built-in L-Band splitter/combiner networks
- Power distribution
- Easy install
